

## ABSTRACT OF THE DISCLOSURE

A method of producing an image is described which includes depositing onto a substrate a material capable of sustaining a relief feature imparted thereto. A coloring agent is applied directly to this material. A material for producing an image is also described which includes an emulsive agent and a viscosity control agent. In addition, an article is described which includes a relief layer and a coloring layer directly in contact with the relief layer. The relief layer includes a material containing an emulsive agent and a viscosity control agent.
